

DIGITAL FORENSICS EXAMINATION REPORT

Case Name:	Operation Dark Web
Case Number:	CY-2024-0090
Examining Analyst:	Agent K. Patel
Department:	Digital Forensics Lab
Date of Report:	May 28, 2026 09:27 UTC
Classification:	CONFIDENTIAL — FOR OFFICIAL USE ONLY

SUMMARY STATISTICS

Artifact Category	Count	Artifact Category	Count
Total Artifacts	43	Normalized Events	0
Web History	0	Emails	0
USB Devices	0	Deleted Files	1
User Accounts	0	Search Queries	0
High Confidence	0	Suspicious Events	1

1. EXECUTIVE SUMMARY

This report presents findings of a digital forensic examination of Operation Dark Web (Case No. CY-2024-0090), conducted by Agent K. Patel of the Digital Forensics Lab.

The examination yielded 43 digital artifacts including 0 web history entries, 0 email records, 0 USB device connections, and 1 recovered deleted files. High-confidence events: 0. Suspicious events: 1.

All evidence has been handled per chain of custody protocols to maintain admissibility.

2. METHODOLOGY

The digital forensic examination was conducted in accordance with NIST SP 800-86 and ACPO Good Practice Guide for Digital Evidence.

- Evidence Acquisition: Subject digital media was forensically processed using write-blocking procedures. MD5 hash values recorded to verify integrity.
- Evidence Verification: Forensic image verified for accuracy. File hash recorded in chain of custody documentation.
- Artifact Extraction: Evidence processed through automated parsing pipeline covering web history, email, USB devices, user accounts, deleted files, registry entries, installed programs, and search queries.
- Normalization: All artifacts normalized into unified schema with full traceability: source file, row/line reference, timestamp, artifact ID, and confidence rating (High/Medium/Low).
- RAG Indexing: All artifacts indexed for cross-referencing and AI-assisted analysis. Each AI finding cites the exact source artifact(s) it is based on.
- Documentation: All findings documented with evidence references in format: 'Finding: [X] | Evidence: [filename] (Row [N]) | Time: [T] | Artifact: [ID]'.

3. KEY FINDINGS

3.1 Web Activity

No web browsing history artifacts identified.

3.2 Email Analysis

No email artifacts identified.

3.3 Device Connections

No external storage device connections identified.

3.4 Deleted Files

File system analysis recovered 1 deleted file(s). Recovery indicates possible deliberate destruction of evidence.

Finding: Deleted: Unallocated Space: 23 MB (potential deleted files)

Evidence: [operation_dark_web_content.txt \(Row 42\)](#) | Time: Unknown | Artifact: [del_42](#) | Confidence: High

3.5 User Accounts

No user account information identified.

3.6 Search Queries

No search query records recovered.

3.7 Installed Programs

No installed program records identified.

4. FORENSIC TIMELINE

Timestamp	Event	Description	Source (Row)	Conf.
Unknown	FILE_DELETED	Deleted: Unallocated Space: 23 MB (potential file)	Deleted file (web_content.t	High

5. EVIDENCE REFERENCES

Complete list of 1 evidence artifact(s) cited in this report:

#	Artifact ID	Source File	Row	Timestamp	Confidence
1	del_42	operation_dark_web_con	42	Unknown	High

6. CONCLUSIONS

The examination of Operation Dark Web yielded 43 recoverable artifacts with 0 high-confidence events identified.

All conclusions are based solely on the digital evidence recovered and analyzed. The forensic examiner makes no determination of guilt or innocence.

7. RECOMMENDATIONS

1. Recovered deleted files should be subjected to detailed content analysis.
2. All recovered artifacts should be reviewed by qualified legal counsel.
3. Chain of custody documentation must be maintained throughout legal proceedings.

8. CHAIN OF CUSTODY

Evidence Item:	operation_dark_web_content.txt
MD5 Hash:	99302a14d6b32c3da0ba286590390056
Examined By:	Agent K. Patel
Department:	Digital Forensics Lab
Analysis Date:	2026-05-28T09:27:06
Tools Used:	Autopsy Parser v3, RAG Engine v3, Automated Digital Forensics Reporter v3
Hash Verification:	MD5 hash computed and recorded
Notes:	Evidence handled in accordance with forensic best practices and ACPO guidelines.

END OF REPORT — Automated Digital Forensics Reporter v3.0
